Summarization Methodology

The above 'Report Summaries' were generated using a well-established Natural Language Processing Text-to-Text Transformer model, **T5**, that was trained on common crawl data.

The summaries are generated via the pre-trained T5 model, which performs **Abstractive Summarization**, condensing the entire collection of reports for each employee into a few key takeaways about his or her performance.

The original reports are stored in the database and can be accessed to verify the content of the summaries for accuracy at the time of each employee's evaluation.

T5 Text-to-Text Pre-trained Model Architecture
